(54) Title: **METHODS AND COMPOSITION FOR SOFT TISSUE FEATURE RECONSTRUCTION**

(57) Abstract: This present invention describes methods and compositions useful for the reconstruction of various soft tissue fea-  
tures such as lips, areola, and many other features by taking a mold of the skin feature to be replaced, such as the areola, prior to  
surgical resection, re-creating the size and shape of the soft tissue feature, for example, the nipple and areola, and making a poly-  
mer or biopolymer scaffold that is biocompatible, has the ability to allow the epithelization of the skin cells over the polymer, the  
capability of cell integration into the body of the scaffold, as well as the capability of infiltration of surrounding nerve fibers into the  
substance of the scaffold, so that the patient may have the benefit of a reconstructed soft tissues feature that not only has the same  
size and shape and appearance as the native tissue, but also has functional sensation.
